

JOHN BOTTA

ENTERPRISE ARCHITECTURE,
VICE PRESIDENT

John Botta joined MJ Insurance in November 2018 as Enterprise Architecture vice president. Prior to officially joining MJ, John served as a data consultant working with our Analytics team in our Benefits Consulting department. John brings with him over 25 years of experience in the pharmaceutical and healthcare industries, having previously served as Director of Enterprise Data Architecture at OurHealth and the Director of Healthcare Solutions at HC1.

At MJ, John provides architectural direction to all of MJ's data management and analytics initiatives. In partnership with MJ's IT team and various internal department leaders, John is building an enterprise data architecture to centralize MJ's data under one roof, and build consistency and automation in our analytics capabilities across the agency. With clear and streamlined reporting, John will empower our consultants and service teams with tools they can leverage to lead our clients in making better-informed and data-driven decisions that bring their futures in focus.

When John is not helping MJ architect how data and analytics will positively impact the future, you can find him computer gaming, reading, writing, thinking, and watching movies. Currently, John's bucket list includes creating a role playing game and writing a book. He also tries to live by the maxim "Life is short, try to make a positive difference in someone's life every day."
