## LIFE INSURANCE – IMPUTING INCOME

Originally Published September 2020

Updated October 2022

Life insurance policies (both group term life and supplemental life policies) are commonly offered by employers, but such policies cannot always be provided on a tax-favored basis like group health plan coverage. Employers offering life insurance to employees and their family members need to understand the taxation rules in order to impute additional taxable compensation where appropriate. The taxation of such benefits will depend upon whose life is insured, the benefit amount, the cost of coverage, and the handling of premium payments.

### EMPLOYEE LIFE INSURANCE

#### Group Term Life Insurance

Life insurance premiums paid by the employer for group-term life insurance on the life of an employee are usually deductible as an ordinary and necessary business expense. However, premium contributions for any benefit amount above \$50,000 must be taxable to the employee, whether the premiums are paid by the employer or the employee. If an employee receives a life insurance benefit amount in excess of \$50,000, then the cost of the insurance in excess of \$50,000, less any amount paid by the employee with after-tax contributions, should be included in the employee's gross income for purposes of calculating social security and Medicare taxes (FICA taxes). The "cost" of group life insurance coverage in excess of \$50,000 is determined using a uniform table (Table I) set forth in Treas. Reg. §1.79-3(d)(2).

**TABLE I—Uniform Premiums for \$1,000 of Group Term Life Insurance Protection**

Age Bracket	Monthly cost per \$1,000 of coverage
Under 25	\$0.05
25 to 29	\$0.06
30 to 34	\$0.08
35 to 39	\$0.09
40 to 44	\$0.10
45 to 49	\$0.15
50 to 54	\$0.23
55 to 59	\$0.43
60 to 64	\$0.66
65 to 69	\$1.27
70 and above	\$2.06

*An employee's age is determined by his or her age at the end of the taxable year.*

# ISSUE BRIEF

The first \$50,000 in life benefit may be handled on a tax-favored basis.

- + If the premium is paid by the employer, there is no need to impute any additional taxable compensation.
- + If any of the premium is paid by the employee, the employee contribution may be handled on a pre-tax basis if paid through the employer's cafeteria plan.

For any life benefit in excess of \$50,000, the value of the additional amount must be taxable to the employee.

- + If the premium is paid by the employer, the employer must impute additional taxable income using Table I.
- + If any of the premium is paid by the employee after-tax, the amount of imputed income is reduced by the amount of after-tax contributions made.

**EXAMPLE: 45-year-old employee elects to receive a life insurance benefit of \$75,000**

*Employer must impute income to the employee for \$25,000 (\$75,000 - \$50,000)*

<b>Employer-Paid Premiums</b>	+ 25 x \$.15 = \$3.75/month or \$45/year
<b>Employee Pre-Tax Contributions \$3/month</b>	+ Pre-tax contributions do not offset any required imputed income + 25 x \$.15 = \$3.75/month or \$45/year
<b>Employee After-Tax Contributions \$3/month</b>	+ After-tax contributions offset any required imputed income + (25 x \$.15) - \$3 = \$.75/month or \$9/year
<b>Employee After-Tax Contributions \$4/month</b>	+ After-tax contributions offset any required imputed income + (25 x \$.15) - \$4 = \$0 imputed income

## **Supplemental Life Insurance**

§79 taxation rules apply to group term life insurance provided by the employer as well as any supplemental life insurance that is considered to be carried by the employer. If a supplemental life insurance policy is carried by the employer, the employer may need to impute additional taxable income to employees for the value of any insurance above \$50,000 (i.e., using the Table I rates), even if the employee is paying the premiums with after-tax dollars.

A supplemental life policy is "carried by the employer" if any of the following occur:

- + The benefits are provided through the same group policy as the group term life offered by the employer;
- + The employer pays for any of the supplemental policy, or permits employees to pay with pre-tax dollars; or
- + The rates for the group life straddle the IRS published rates in Table I (i.e. some of the life plan rates are higher than the Table I rates and some are lower).

# ISSUE BRIEF

To ensure there will be no additional taxable income for employees on any supplemental life insurance purchased in excess of the \$50,000 threshold, the employer should: (i) make sure that the supplemental life is provided through a separate policy; (ii) have the employee pay 100% of the premium with after-tax dollars; and (iii) ensure the monthly premium rates do not straddle the IRS table I rates. If this is the case, then there is no imputed income for the employees for any supplemental life insurance in excess of \$50,000.

If the supplemental life insurance policy is under the same contract as the group term life policy, they are generally treated as one for purposes of determining taxation in accordance with §79 rules, unless there is an argument that they can be treated as separate policies. In IRS Private Letter Ruling 1350032 (<https://www.irs.gov/pub/irs-wd/1350032.pdf>), the IRS indicates the supplemental life policy may be treated as separate if the premiums charged are developed separately using separate actuarial computations and equal or exceed the life insurance benefit payouts for each policy year, there are no subsidies or credits exchanged between the policies, and no dividends are allocated to another policy.

If it cannot be argued that the policies are separate, the premiums are not paid 100% after-tax by employees, or the rates straddle the cost set forth in Table I, employees should have imputed income for amounts above \$50,000 to the extent the premiums are lower than the rates in Table 1. However, if employees pay the premiums after-tax and the amount paid equals or exceeds the cost of coverage based on Table 1, there is no imputed income.

**EXAMPLE: 45-year-old employee elects to a supplemental life insurance benefit of \$50,000 (in addition to the \$50,000 of group term life coverage provided by the employer)**

<b>Not Carried By the Employer</b> (separate policy, after-tax employee contributions, and no rate straddling)	+ No imputed income for the employee
<b>Carried By the Employer</b> (joint policy, employer contributions, or straddling rates)	+ Employee paid \$5/month after-tax (50 x \$.10) + Table I cost of coverage is \$7.50/month (50 x \$.15) + Imputed income = \$2.50/month or \$30/year
<b>Carried By the Employer</b> (joint policy, employer contributions, or straddling rates)	+ Employee paid \$9/month after-tax (50 x \$.18) + Table I cost of coverage is \$7.50/month (50 x \$.15) + No imputed income for the employee (\$9 > \$7.50)

## SPOUSAL OR DEPENDENT LIFE INSURANCE

Employer-paid dependent life coverage of up to \$2,000 may be provided on a tax-favored basis (considered “de minimis”). However, if the amount of the employer-paid dependent life coverage exceeds \$2,000 then the cost of coverage of the entire policy, including the amount below \$2000, must be included in income using the Table 1 rates similar to the process outlined above.

Employee-paid dependent life coverage in excess of \$2,000 can be provided tax-free as long as the premiums paid by the employee equal or exceed the cost of coverage under Table 1. If the employee’s premiums are less than the Table 1 amount, then a portion of the coverage is deemed employer-paid. The portion of the coverage deemed employer paid is the difference between the Table 1 cost and the after-tax premiums paid by the employee divided by the total Table 1 cost multiplied by the face-amount of the life insurance benefit. If this amount exceeds \$2,000 then the Table 1 cost of coverage for the entire policy, minus the after-tax premiums paid by the employee, must be reported as imputed income.

Life insurance on the life of anyone other than an employee (e.g., an employee’s spouse or dependent) cannot be included in a cafeteria plan, and therefore any employee contributions toward dependent life coverage must be paid for on an after-tax basis. In addition, flex credits, if any, should not be used toward such coverage.
